eTurns TrackStock®
EMS

Simple. Optimized.
Inventory and Equipment Management for EMS.

eTurns provides EMS agencies with automated par restocking, as well as email alerts for scheduled vehicle maintenance and device calibration. Our cloud software provides real-time visibility wherever mission-critical inventory is stored and creates electronic records for increased accountability and decreased liability.

How It Works

eTurns is cloud-based inventory and equipment management software accessible from anywhere. eTurns captures inventory information at the point-of-use (POU) in four ways:

iPhone Replenishment

Use an Android/iPhone/iPad/iPod Touch to replenish parts.

Inventory Management with Smartphone/PDA

Use a barcode scanner or smartphone to manage inventory.

eVMI Smart Replenishment with Sensors

Use sensors under bins of supplies together with eTurns Smart Replenishment software for fully automated replenishment. Sensors poll the weight of the bins regularly and complete physical inventory counts multiple times a day with no human involvement.

RFID Tracking

Track inventory receipts and consumption with no human intervention.

Right Supplies. Right Place. Right Time.

Automate with eTurns cloud software to optimize inventory levels, manage liability, simplify restocking and save time and money.

→ Set par/min/maxes to automate restocking.

→ Access vendors' catalogs to find new items to manage in your stockroom/truck.

→ Drive efficiency with eTurns's powerful analytics, email alerts and reporting.

→ Integrate eTurns with other ERP or accounting solutions.

"We were using a completely manual process that led to a stockroom filled with unused supplies and lots of stuff expiring. Switching to eTurns demonstrated significant change in a short period of time. The value of our inventory on hand was north of $75,000 when we started using the system; now we have around $20,000 sitting on the shelves. The drain on my time has been significantly reduced and continues to improve."

— **Brian Galowitz**, Minnesota Operations Manager, Lakes Region EMS

Schedule Vehicle and Device Maintenance, and Track the Parts You Need
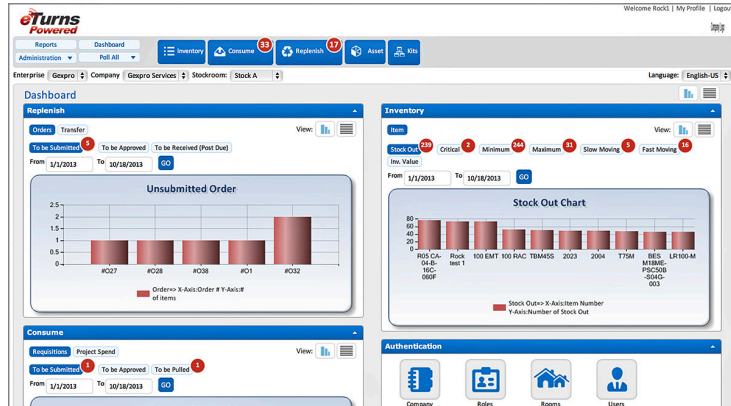

eTurns helps you manage vehicle and equipment maintenance. Use eTurns to schedule the work and send email alerts for upcoming maintenance. We also manage the parts needed for that maintenance.
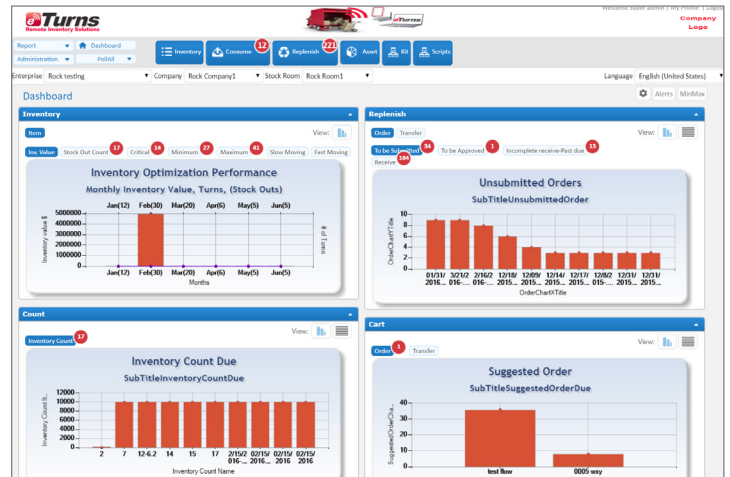

Benefits of the eTurns EMS Solution

→ Provide real-time visibility into stock levels of devices, supplies and medicines in stockrooms, ambulances, fire trucks and more.
→ Ensure accountability for supplies on a truck at the beginning/end of a shift.
→ Track controlled substances.
→ Track expiration dates to decrease waste.
→ Avoid stockouts.
→ Decrease shrinkage.
→ Decrease the liability associated with poor inventory management.
→ Simplify and automate the reordering process.
→ Optimize inventories and reduce levels by up to 40%.
→ Reduce PO costs by up to 90%.
