

Pulsar Plus

Smart EV charging technology
made simple

Business Charging Solutions

Pulsar Plus

Smart EV charging for homes, offices and everywhere in between

Wallbox Pulsar Plus is our most powerful and compact 240V, Level 2 EV charging solution. Capable of delivering up to 11.5kW of charging power, Pulsar Plus is affordable and scalable, growing with businesses and communities as their EV charging needs change.

NEMA Type 4 rated watertight and suitable for outdoor installations, Pulsar Plus can charge any electric car on the market today and is future-ready to handle tomorrow's more powerful EV batteries.

Get Pulsar Plus and start charging smarter.

PULSAR PLUS

Business Charging Solutions

Compact design, powerful performance

240V, Level 2 charging technology in an incredibly small size. Adjustable capacity from 16A to 40A or 48A depending on model.

Scalable

Owners and operators can easily connect multiple chargers and manage their charger networks, growing their charging infrastructure as needed.

Compatible

Pulsar Plus fits every EV available in North America.

Durable

UL listed and NEMA Type 4 rated watertight, Pulsar Plus is safe for indoor and outdoor installations.

Connected

With both Wi-Fi and Bluetooth connectivity, users and charging network operators have multiple ways to connect to and control connected chargers.

Power Sharing

Up to 25 Pulsar Plus chargers can be connected to a single electrical circuit, dynamically balancing power delivery to connected vehicles while keeping total electrical demand within safe limits.

Network ready

Available as an option, Pulsar Plus can be OCPP-ready and integrate with utility demand response programs and charging networks.

myWallbox

The myWallbox platform enables control over multiple chargers, users, and groups, and provides access to real-time statistics.

PULSAR PLUS

Business Charging Solutions

Benefits to property owners and management companies

High ROI

As EV adoption increases, demand for EV charging will only grow higher. Investing in EV charging infrastructure adds equity, increases property value, and attracts new customers and tenants.

No complicated equipment leasing

Pulsar Plus is an affordable solution for smart EV charging at commercial properties and residential communities, no leasing necessary.

Low cost of ownership

With Wallbox technical and customer support standing behind every charger, property managers and charging network operators can save hundreds of dollars avoiding monthly maintenance fees charged by other providers.

Meet sustainability goals

Integrating EV charging can help properties achieve sustainability targets including LEED certification.

PULSAR PLUS

myWallbox

One platform, multiple ways to access and control your charger network

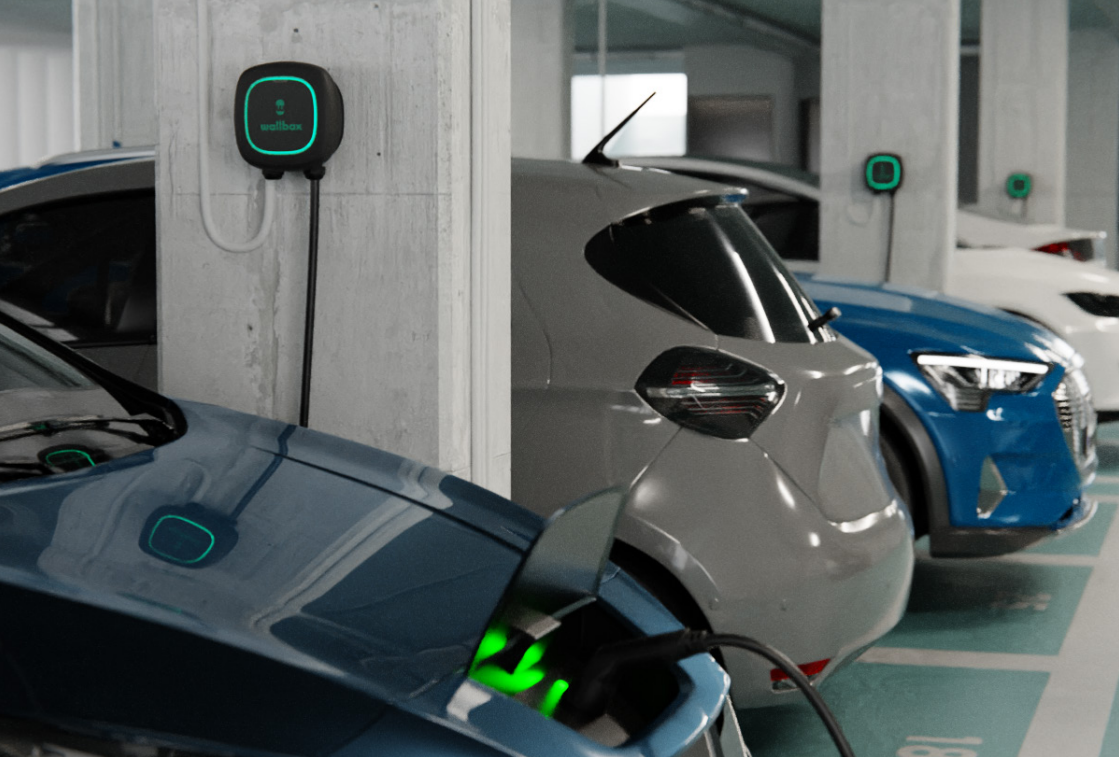

With Wi-Fi and Bluetooth connectivity, Pulsar Plus works with the myWallbox app and web portal platform.

With myWallbox, drivers can access chargers and activate charging sessions from their mobile devices, while charging network operators can manage connected chargers, manage users and groups, remotely lock and unlock chargers, and access real-time data and charging history.

Coming soon, Wallbox Business Services will enable payments on Pulsar Plus for private and semi-public installations, opening up new opportunities for charging network operators to recover costs or turn their EV charging networks into revenue generators.

- ✓ **Manage charging and monitor the status of your EV remotely from anywhere**
- ✓ **Set and change charging schedules**
- ✓ **Remote charger locking and unlocking**
- ✓ **Manage multiple users and multiple chargers**
- ✓ **Real-time charging statistics**
- ✓ **Real-time notifications**
