

TEMPERATURE SHIELD FOR EPINEPHRINE PEN

The **VIVI Epi** is a first of a kind temperature protection shield for the epinephrine pen. The combination of unique thermal insulation and heat absorption material (PCM) gives the medication unprecedented protection from hot/cold temperatures and light.

Simply place the epinephrine pen into the **VIVI Epi** and go anywhere!

**VIVI Epi is compatible with Mylan EpiPen®*

Protects medication from overheating or freezing – reduces drug waste and expense

Enables effortless storage – fits in a medical or equipment bag for easy transport

Hassle-free; requires no ongoing maintenance - reusable for years on end, without electricity, ice or batteries

Provides peace of mind – indicator light confirms medication has maintained clinically acceptable temperature

Millions of people with severe allergies depend on epinephrine to save their lives. In an emergency, they rely on emergency responders (EMS, police and firefighters) to carry their life saving drug and administer to them in their time of crisis.

The VIVI Epi device protects epinephrine so it remains effective. Epinephrine should be stored at a temperature of 68°-77°F and cannot be exposed to extreme heat, cold or light. Medication can become degraded or ineffective due to improper storage.

Simply insert the EpiPen into VIVI Epi, store in your equipment bag and go anywhere. Emergency responders have peace of mind that the medication is stored properly and will not degrade.

Mobile medicine situations such as community events (concerts, fairs, sports activities, etc.) or life flight are no longer a challenge, when using VIVI Epi, in keeping epinephrine safe.
